PROFESSIONAL SUMMARY

B.Tech CSE (AI & ML) student with hands-on experience building LLM applications, RAG pipelines, and AI-powered workflow automation. Proficient in Python, LangChain, ChromaDB, and n8n. Passionate about applied AI and building practical, real-world systems.

EDUCATION

B.Tech – CSE (AI & ML) | **Amity University Punjab** | 2024 – 2028
CGPA: 8.03/10 | Coursework: Machine Learning, NLP, Data Structures & Algorithms, Deep Learning

Class XII – ISC | **St. Xavier's Senior Secondary School** | 2023 | 88%

Class X – ICSE | **St. Xavier's Senior Secondary School** | 2021 | 90.8%

TRAINING & PROGRAMS

Summer Training – n8n & Workflow Automation | **IIT Jammu, Techible & i3c** | Summer 2025

- Hands-on training covering n8n workflow automation, API integrations, LLM orchestration, and building multi-step AI automation pipelines.

TECHNICAL SKILLS

Languages: Python
AI / ML: LLMs, RAG, Prompt Engineering, NLP, Conversational AI, Structured Output Parsing
Frameworks: LangChain, Streamlit, Whisper AI, Mistral AI, Sarvam AI
Automation: n8n, API Integration, Human-in-the-Loop Systems, Telegram Bot API
Databases: ChromaDB (Vector Database)
Tools: Git, GitHub

PROJECTS

AI-Powered LinkedIn Content Automation | **Personal Project** | 2025
Tech Stack: n8n • Nemotron 550B • Telegram Bot API • Structured Output Parser

- Built an end-to-end AI content pipeline using n8n that converts a raw idea (submitted via Telegram) into a structured, story-based LinkedIn post using the Nemotron 550B LLM.
- Designed structured output parsing to extract distinct post components — hook, narrative, lesson, CTA, and hashtags — ensuring predictable, processable output over unstructured text.
- Implemented a human-in-the-loop approval system where drafts are reviewed before publishing; the user can approve, reject, or request edits, triggering an iterative AI refinement loop.
- Orchestrated multi-service API integration within n8n connecting Telegram, LLM APIs, and content storage in a single automated workflow.

AI Video Assistant | **Personal Project** | 2024
Tech Stack: Python • LangChain • Whisper AI • Mistral AI • ChromaDB • Streamlit • Sarvam AI | GitHub: AI_Video_Assistant

- Built a RAG-based application that ingests YouTube videos, generates transcripts via Whisper AI, and enables conversational Q&A using LangChain + Mistral AI + ChromaDB.
- Extended with Hindi transcription support via Sarvam AI's API, enabling multilingual video processing beyond the base English pipeline.
- Automated transcript summarization and built an interactive Streamlit UI for end-to-end user interaction.

AREAS OF INTEREST

- AI Workflow Automation – multi-step pipelines combining LLMs, APIs, and human-in-the-loop systems.
- Applied AI – real-world LLM products integrating retrieval systems and structured output pipelines.
- Backend Development – building APIs, server-side systems, and scalable infrastructure for AI applications.
